

moshi

purveyor of electronics fashion

moonrock

Features:

- ▶ High efficiency Neodymium drivers. (20 Hz-20kHz / -10dB@1kHz)
- ▶ Integrated MEMS microphone with click button controls.
- ▶ Hybrid injection earbuds (3 sizes: S/M/L) for optimal fit and comfort.
- ▶ Custom carrying case with cable management.

personal in-ear earphones

More than just eye candy, Moonrock elevates your overall music enjoyment with Moshi Audio's acoustically tuned driver units that effortlessly render crisp highs and balanced mids and bass. The in-ear design coupled with our proprietary hybrid-injection eartips, effectively block out external ambient noise while providing hours of comfortable listening.

The high efficiency drivers (105 dB/mW) deliver ample presence with ease; offering full dynamic sounds even at lower listening volumes.

Moonrock is equipped with an iPhone compatible microphone for answering calls on the fly while listening to your favorite tunes. It also comes with its own pocket-size carrying case with cable management to suit your carefree on-the-go lifestyle.

dulcia

Features:

- DR6 Neodymium drivers (15Hz-20kHz / -10dB@1kHz) with anodized aluminum casing.
- Integrated microphone with click button controls (compatible with iPhone and most other smartphones).
- Hybrid injection earbuds (3 sizes: M/S/SS) for optimal fit and comfort.
- Tangle resistant flat cable for simple cable management.

stylish personal in-ear headphones

Designed for style-conscious music lovers, Dulcia looks as sweet as it sounds. Inside the anodized aluminum body is Moshi Audio's DR6 Neodymium drivers that deliver rich warm sounds with punchy bass. The slim profile design coupled with our proprietary hybrid-injection silicone ear tips effectively block out external ambient noise while providing hours of comfortable listening. Dulcia is equipped with an iPhone-compatible microphone for answering calls on the fly while listening to your favorite tunes. In addition to its tangle-free flat cable, the package also includes a custom carrying pouch for convenient earphone storage.

vortex

Features:

- RigidBody™ steel alloy construction delivers deep, clean bass.
- High definition Neodymium drivers with extended range (10 Hz-20kHz / -10dB@1kHz).
- Braided ultra-light weight cable with integrated MEMS microphone.
- Custom silicone carrying case with cable management.

premium in-ear earphones

Designed for discerning ears that crave for satisfying bass with extraordinary detail, Vortex™ reference in-ear headphones feature Moshi Audio's proprietary RigidBody™ driver housing aimed to deliver fast articulate bass without distortion. The drive units consist of high-definition Neodymium drivers housed in sintered steel alloy which minimize cavity-induced coloration. This design not only vastly improves low frequency extension, but also renders silky smooth highs.

To obtain meaningful bass from any in-ear headphones, a tight seal between the ear tip and your ear canal must be

achieved and maintained. Most in-ear headphones' cables are much heavier than the individual driver unit, this constant weight-drag causes the drivers to fall out of your ears' secure sealed position after awhile. Vortex's lighter cable/heavier driver weight distribution enables the drivers to fit securely in your ears even when the cable is fully extended. To further ensure a secure yet comfortable fit, Vortex comes with 3 different sizes of hybrid-injection silicone ear tips as well as a set of memory-foam ear tips for optimal listening experience. It is also equipped with an iPhone compatible microphone for answering calls on the fly while listening to your favorite tunes.

vortex pro

Features:

- Ultra high definition XR9 drivers with extended range (10 Hz-22kHz /-10dB@1kHz).
- RigidBody™ steel alloy construction delivers clean, dynamic sound without distortion.
- Braided cable with integrated 3-button remote and omnidirectional MEMS microphone.
- Custom silicone carrying case with integrated cable management.

audiophile grade earphones

Featuring Moshi Audio's latest XR9 extended bandwidth drivers, Vortex Pro offers an audiophile auditioning experience so engaging, that you will want to listen to your favorite songs all over again. The 9mm ultra high definition XR9 drivers deliver clean, natural and agile sound over a much wider frequency range with exceptional soundstage and depth. On the other end of the equation is our proprietary triangular RigidBody™ housing, consisting of sintered steel alloy to minimize cavity-induced coloration. The combination renders unsurpassed fidelity across the full spectrum with acoustic transparency and precision. Vortex Pro comes with 3 different sizes of hybrid-injection silicone ear tips as well as a set of memory-foam ear tips for optimal listening experience and comfort. The package also includes a custom silicone carrying case for easy storage and retrieval.

Keramo

Features:

- Sintered ceramic housing delivers a natural and pristine sound.
- Ultra high definition XR9 drivers with extended range (10 Hz-22 kHz /-10dB@1kHz).
- Integrated omnidirectional MEMS microphone ideal for Smartphones.
- Custom carrying case for headphone storage and easy cable management.

audiophile ceramic earphones

Experience clean, unadulterated sound with Keramo. Moshi Audio's designers employed sintered ceramic as Keramo's driver housing to ensure a nearly flat frequency response with minimal harmonic distortion. This unique housing combined with Moshi Audio's ultra-high definition 9mm driver produces a pure and natural soundstage without any treble or bass boost. Keramo is the ideal choice if you're looking for an accurate IEM that delivers velvety-smooth mids and highs with natural sounding bass. The package includes six sets of hybrid silicone eartips for better fit and comfort, as well as a custom carrying case for easy storage and retrieval.

premium dual-driver earphones

Absolute Clarity

Designed for aural connoisseurs who demand absolute clarity in music reproduction, Clarus by Moshi Audio revives music that otherwise sounds dull when played through ordinary earphones. Clarus is able to deliver this exquisite acoustic experience through its proprietary DynaDuo™ drivers with a precision-tuned passive crossover network. Listen to your favorite music, whether it's jazz, rock, classical, or acoustic music, your discerning ears will be able to discover every nuance that has eluded them throughout the years.

Total Immersion

Clarus is equipped with DynaDuo™, which consists of two dynamic drivers that enable a wide frequency response with pristine sound reproduction. Typical IEMs require complete seal-off of ear canals to achieve meaningful bass response. Clarus manages to circumvent this

problem by utilizing a dedicated woofer with sound guide to deliver robust low frequency sound into your ears. What really sets Clarus apart however, is its dedicated high frequency driver, which has been acoustically engineered to render airy transparency. The passive crossover has also been optimized for exceptional uniformity. The end result is an immersive listening experience with enhanced transparency and accurate sound imaging.

Designed Ergonomics

The earpieces are designed to rest on the cusp of the ear canals, not inside of them, thereby eliminating ear fatigue. The soft ear loops comfortably hook over the ears so that Clarus stay securely in place even when you're on the move. Clarus also comes with various sizes of earpieces for both comfort and optimized bass response.
